Data Storage Guidelines for HIPAA Compliance

Congratulations on the purchase of your FujiFilm SonoSite ultrasound system! As you prepare your system for initial clinical use, we would like to thank you for choosing our product. Our dedication to providing products that strictly adhere to Reliability, Durability and Ease of Use means that your product will be easy to operate and will do so reliably in extreme conditions.

To help maintain peak efficiency of your system we recommend the following:

- Work with your Image Management (PACS) team and/or IT group to ensure you have an image archive and/or data backup plan for maintaining copies of diagnostic images and reports produced by your ultrasound system

Although your ultrasound system does have substantial onboard memory for storing studies, we recommend you regularly delete archived studies to maintain adequate storage for portable exams. Reference your user's manual for additional information on network and media archiving mechanisms.

Please contact Technical Support at 1-877-657-8118 or ffss-service@fujifilm.com, if you have any questions.

Sincerely,

Fujifilm SonoSite, Inc.
